

Kits and Connectorization

SAVE TIME AND MONEY WHEN EVERYTHING YOU NEED ARRIVES AT THE JOB SITE IN ONE PACKAGE

The Draka kit concept is simple: put everything a customer needs for an installation into a single shipment that's delivered to the jobsite on the day it is needed.

By everything, we mean **everything**:

- Cable that's cut to length
- Compensation cable and accessories
- Power wire
- Grips and hanging devices
- Wireway and trough
- Electrical hardware (fasteners, wire nuts, etc.)
- Tools and special components, such as seismic detectors.

Draka kits save effort and money. By providing ALL the components for installation in one shipment, there's no wasted time getting parts and pieces.

Your efficiency is increased, making for a more profitable service call.

When you add cable connectorization to the package, your time-savings become even greater.

Just call your Draka sales or customer service representative for details on kits and just-in-time delivery.
